

Title: SYSTEMS AND METHODS FOR FACILITATING ACCESS TO
DOCUMENTS VIA ASSOCIATED TAGS

ABSTRACT OF THE DISCLOSURE

Systems and methods are provided to facilitate access to documents via associated tags. According to one embodiment, a first document tag is initially assigned to a document. For example, an author may review a document and indicate which document tag should be assigned to the document. An associated tag for the document is then automatically determined based on the first document tag. For example, a pre-determined tag association may be used to determine the associated tag based on the first document tag. The author may then review the associated tag to determine whether or not the associated tag should be also assigned to the document.
